Overview

Purpose

To identify and visualize the most influential Telegram channels and messages within a given linguistic and thematic scope.

How it works

1. Check language relevance

→ Filters messages to keep only those written in languages relevant to the project's scope.

2. Assess channel virality

→ Evaluates how active, participative, and well-connected each channel is, combining indicators of:

- posting activity
- audience participation
- network centrality

3. Assess message virality

→ Measures how widely each message spreads through replies, forwards, and reactions.

4. Prioritize key content

→ Focuses the analysis on the **most viral channels and messages**, determined by statistically defined thresholds.

Outcome

A refined list of **high-impact Telegram channels and messages**, revealing key actors and clusters that drive information diffusion.
